

# Real-time Conflict Awareness in Distributed Version Control Systems

A master's thesis in progress

# About

- A tool that helps programmers to be aware of possible merge conflicts in their projects

# Setup

Git protocol

Custom JSON over HTTP API

# Demonstration

- Let's go!

# Features

- Can use with existing git projects
- Still functional if not everyone in a team uses it
- Views and filters that help you get the information you need
- Elegant web interface provides easy access for all users
- CloudStudio provides an API that allows this information to be integrated into IDEs at a later point
